Hazard Control Technology
150 Walter Way
Fayetteville Georgia, 30214
Attn: Mr. Rick Morley

April 19, 1999

Dear Rick,

Thank you again for your call the other day, it's always nice to hear from you. As I told you, we are using F-500 possibly 4 or more times a day. Now I know you may think this is not accurate but let me assure you it is. In fact, my plant manager Bobby Sumpter advised me that we have used the product hundreds of times in the factory. Because we are a crumb rubber manufacturer, we have a serious fire hazard throughout the plant at all times. Crumb rubber that is like talcum powder along with tire fiber finer than cotton balls, I think you get the picture. We have many small friction fires and because of constant alteration of the equipment, many welding related fires as well. F-500 is the only product that can extinguish the fire, lock up any unburned fuel and still never damage any equipment. I really don't know how we could run without it. I have never found a product that works like it and I have many years in this business. If I can ever be of any help to you and your company please don't hesitate to have your customers call me personally. I would also extend an invitation to them to visit our facility and let them see first hand how we handle our fire hazards with F-500 extinguishers.

Sincerely,

Gary Bryant, Vice President
